Dear Mr Results,

Please find enclosed the results of your Lorisian food intolerance test. The test analysed your blood sample for food specific (IgG) reactions.

REACTION - indicates you have raised IgG antibody levels to these food(s) and you should try to eliminate them completely from your diet. You may benefit from removing all foods scored REACTION from your diet.

BORDERLINE - indicates you have a borderline reaction to these foods and may or may not benefit by limiting their consumption.

NO REACTION - these foods can be eaten without restriction, unless you already know that they cause you a reaction and you have been avoiding them, in which case you should continue to do so.

Please note that this is a food intolerance test and not an allergy test. If you suffer classical allergic (IgE) reactions to any of these foods please do not eat them. Your test results are complementary to and not a substitute for the best medical help. The test will not identify all the different types of food sensitivity (such as lactose intolerance), and it is not diagnostic of coeliac disease. The advice given is not intended to replace any recommendations offered by your GP or Healthcare Practitioner, as they will have full details of your medical history.

If your chronic symptoms do not improve significantly over the next few weeks we advise you to contact a health professional. Changes should not be made to children's diets without first consulting a health professional.

Please be aware that you may notice some unexpected results from your food and drink intolerance test.

- There are many hidden ingredients in the things that we consume e.g. lychee can be found in sweetened alcoholic drinks, and beetroot is used in many things as a natural colourant. Therefore, you may not consciously be aware of eating some of the items that are flagged as REACTION or BORDERLINE, so it is very important to always look at the list of ingredients carefully.
- Please also note that if you have already been successfully excluding certain foods from your diet due to a previously suspected intolerance then that intolerance may not show up on the results.

P.T.O.

- There may be cross-reactivity between similar proteins in different foods. If you have a positive result to a food or drink ingredient that you do not normally eat then continue to avoid it.

Many people wish to start re-introducing ingredients into their diet following a period of exclusion. This must be done with care and slowly. Introduce one food or drink ingredient at a time and leave one week between the introduction of that ingredient and the next. If there are no symptoms after a few days then use that ingredient on a four day rotation to maintain increased tolerance. If at any time your symptoms start to return or you start to feel ill DO NOT continue with the re-introduction of that ingredient.

We know from our research that the majority of people who alter their diet in accordance with their test results show an improvement in their symptom(s) within a few weeks. We hope that you are one of them.

Yours sincerely,

Lorisia Customer Care

Individual Content of Mixes	
Berry Mix	Raspberry / Blackberry / Strawberry
Citrus Mix	Grapefruit / Lemon / Lime / Orange
Crustacean Mix	Crab / Lobster / Prawn / Shrimp
Herb Mix	Coriander / Parsley / Dill / Cumin
Legume Mix	Haricot Bean / Pea / Peanut / Soya
Melon Mix	Watermelon / Honeydew / Cantaloupe
Mint Mix	Mint / Sage / Basil / Thyme
